## Who is Sumitomo Drive Technologies and what do we do?

Sumitomo Drive Technologies is a dependable provider of industrial solutions to many companies world wide. We have skilled, knowledgeable, and creative employees that have been making gearmotors and speed reducers for more than 70 years.

Wait.....  
Gear what? And speed who?

While you may have never heard of these products, you depend on them everyday. Our gearmotors are the strong silent type, ensuring that everything in the background runs smoothly, as you continue on with business as usual. So what exactly do gearmotors and speed reducers do? And how do they work? Well you don't have to worry about the mechanics of things, we've got that part handled. But essentially, they are pieces of equipment that convert fast moving energy into slow moving power (told you we were strong).

Take for instance the baggage carousels at the airport. Without a speed reducer the conveyor would move entirely too fast, flinging your suitcase everywhere. Also, the carousel would not have enough power to move your overstuffed suitcase of "back-up" items that you just had to have.

Of course airports are not the only place you can find us, our products power almost anything that moves (with the exception of a cars). So, where are some other places that gearmotors and speed reducers help move things along:

- In automobile plants helping move parts to the right places so that the worlds top manufacturers build can the latest cars.
- Helping to turn conveyors in parcel handling plants that route your gift to the right location.
- Powering mixers that meld ingredients to your favorite treats before moving them to be packaged and sent off.
- Slowing inching you to the top of your favorite roller coaster ride.
- Critical power processes in water treatment plants that make your water usable again.

**Here at Sumitomo Drive Technologies we strive to create solutions that will change the world.  
So now it's your turn, what can you create?**
